Wellness Bulletin – Drowning Prevention

California Department of Developmental Services

Drowning Prevention

Drowning can happen to anyone, even people who know how to swim. You can drown in less than a minute and in only a few inches of water. You can take steps to keep yourself and others safe when in and around water.

Why is this Important?

- Drowning can happen anywhere there is water.
- Drowning is preventable. There are things you can do to make sure it doesn't happen to you.
- Individuals who survive near-drowning often have permanent brain damage and may need help for the rest of their lives.

What to do if you are Having an Emergency in the Water

- Yell for help.
- Keep your head above the water.
- Flip onto your back and float. Spread your arms and legs. Take deep breaths so you stay afloat.

 Kick off your shoes and take off any extra clothes (like a jacket or heavy pants) that

might prevent you from floating.

- Try to signal for help.
 - If someone reaches out with their hand, leg, or an object that floats, grab it so they can pull you to safety.

Warning Signs of Drowning

There often is no warning or sound when someone is drowning, so watch for these signs:

- Person in the water has their head tilted back.
- Person in the water has their hair over their face or forehead.
- The person in the water looks like they are floating face down.
- Person in the water looks like they are trying to climb a ladder.

Downloadable Poster

You can download this poster from DDS about how to stay safe in the water: <u>Drowning is Silent</u>

Wellness and Safety Bulletins are produced by the Department of Developmental Services to alert individuals, families, and others to specific risks identified with our community.

Please provide feedback on this bulletin and what we can do better through this survey: Bulletin Survey

Tips to Stay Safe in the Water

- Learn to swim.
- Learn basic water safety skills like floating.
- Learn about what to do in emergencies.
- Never swim alone. No one is old enough to swim without a buddy or telling someone.
- Be careful even in the bathtub.
- Use floatation devices or wear life jackets when going swimming or on a boat.
- Do not swim if you take medication that makes you drowsy.
- Do not get into the water if you have been drinking alcohol.
- Don't go into the water at the beach if there are warnings about rip tides.
- Get out of the water if you have floated or drifted too far.
- Close gates around swimming pools or spas.
- Close pool or spa covers when no one is in the water.
- Do not jump into the water to try to save someone else.
- Instead, reach in with your hand, leg, or an object or throw something that floats such as a life jacket into the water that the other person can grab onto.
- Always supervise young children around buckets of water or wading pools.
